

Code: QA383																		
Name: Eletroanalítica																		
Name in English: Electroanalytical Chemistry																		
Name in Spanish: Electroanalítica																		
Subject type: Weekly																		
Approval Type: Grade and frequency																		
Characteristic: Regular																		
Frequency: 75%																		
Period Type / Offering period: Semi-annual / Every period																		
Requires Final Exam: Yes

Occurrence on curriculum: 05, 50																		
Pre requirement: QA282																		
<b>Summary:</b> Introduction to electronalytical chemistry. Potentiometry. Electrogravimetry, Coulometry. Voltammetry. Amperometry.																		
<b>Program:</b> Galvanic and electrolytic cells. Potentials in electrochemical cells and electrodes. Liquid junction potential. Activity and the influence on electrode potential. Thermodynamics of cells potentials. Nernst equation. Standard electrode potential. Electrical double layer. Currents in electrochemical cells. Ohmic potential drop. Polarization and sources of polarization. Faradaic and capacitive current. Mass transport phenomena. Reference electrodes. Metallic and membranes indicators electrodes. Selective coefficient. Instruments for potential measurement. Direct potentiometry. Operational pH definition. Potentiometric titration. Coulometry. Electrolysis at constant current. Electrolysis at Constant potential. Direct methods and coulometric titrations. Coulometric instrumentation. Potentiostat. Voltammetry. Excitation signals in voltammetry. Charge transfer kinetics. Voltammetric instrumentation. Cyclic voltammetry. Stripping methods. Amperometry. Amperometric sensors. Amperometric titrations. Biosensors.
